PROBLEM STATEMENT

- Patients forget medicine
- No 24/7 monitoring
- Risk of wrong dosage
- Caregiver shortage
- No automatic dispensing
- Safety hazards unnoticed
- Lack of smart integration.

Solution

- automatic medicine dispensing
- easy to use
- real time alerts
- on-time remainders
- smart iot control
- user friendly
- safety alerts
- cost affordable

MediGuard Bot is a compact ESP32-based robot that automatically dispenses medicines on time, detects gas and fire hazards, and allows caregivers to monitor patients remotely using IoT and a camera, ensuring safety and proper care for elderly and patients.

Health challenges

Medication Non-Adherence	Patients often forget to take medicines on time.
Lack of Continuous Care	Caregivers cannot monitor patients all the time.
Safety Risks at Home	Gas leaks or fire accidents may go unnoticed.
Dependency on Caregivers	Patients depend on others for daily care
Human Errors in Medication	Manual dispensing cause missed or wrong doses.
Limited Healthcare Staff	Hospitals face shortages of trained staff.

MARKET SCOPE & IMPACT

MARKET SCOPE

- Growing elderly population needing continuous care and assistance.
- Rising demand for home healthcare and smart medical devices.
- Hospitals and elderly care centers seeking automation to reduce staff workload.
- Increasing adoption of IoT in healthcare for remote monitoring.
- Need for affordable and compact healthcare solutions, especially in India.

IMPACT

- Improves medication adherence, reducing health risks.
- Enhances patient safety through hazard detection and alerts
- Reduces caregiver and hospital staff workload using remote montitoring.
- Supports remote monitoring and telehealth services.
- Improves quality of life for elderly and chronically ill patients.

Location: worldwide

Business model

Direct Product Sales Model
MediGuard Bot is sold as a one-time automated device for scheduled medicine dispensing and safety alerts.

After-Sales Support Model
Post-purchase assistance, troubleshooting, and basic service support.

Maintenance & Upgrade Service Model
Optional paid services for maintenance, refills, battery replacement, and feature upgrades.

Competitive lanscape

Existing Solutions

Current solutions include pill reminder apps, basic medicine dispensers, and elderly care systems, which mainly focus on reminders but lack full automation and safety features

Limitations of Competitors

Most competitors are costly, not portable, and do not combine medicine dispensing with safety alerts, making them less suitable for home use.

Direct Competitors

Direct competitors are automated pill dispensers and healthcare robots that dispense medicines but are often expensive or designed mainly for hospitals.

Our Competitive Advantage

MediGuard offers a low-cost, compact, and automated solution that combines medicine dispensing and safety alerts, making it ideal for homes and elderly care centers.

Next step & Scale

Autonomous Operation	The system will function fully automatically without manual control for navigation and medicine dispensing.
Patient Health Tracking	Continuous monitoring of patient data to ensure timely medication and health status updates.
Doctor Tele-Consultation	Conference calls with doctors will be enabled before due dates for timely medical guidance.
Smart Notifications	Automatically send alerts and messages to both the doctor and the patient regarding medication schedules and health status.

Support we need

1. Technical Support
   Help with automation design, hardware integration, and testing.

2. Medical Expertise Support
   Guidance from doctors to ensure safe and correct medicine dispensing.

3. Financial Support
   Funding for components, prototyping, and initial production.

4. Institutional Support
   Support from hospitals or elderly care homes for pilot testing and validation.
